calculations once prohibitively time consuming can be completed in microseconds by modern computers this has resulted in dramatic shifts in emphasis in applied statistics not only has it freed us from an obsession with the 5 and 1 significance levels imposed by conventional tables but many exact estimation procedures based on randomization tests are now as easy to carry out as approximations based on normal distribution theory in a wider context it has facilitated the everyday use of tools such as the bootstrap and robust estimation methods as well as diagnostic tests for pinpointing or for adjusting possible aberrations or contamination that may otherwise be virtually undetectable in complex data sets data driven statistical methods provides an insight into modern developments in statistical methodology using examples that highlight connections between these techniques as well as their relationship to other established approaches illustration by simple numerical examples takes priority over abstract theory examples and exercises are selected from many fields ranging from studies of literary style to analysis of survival data from clinical files from psychological tests to interpretation of evidence in legal cases users are encouraged to apply the methods to their own or other data sets relevant to their fields of interest the book will appeal both to lecturers giving undergraduate mainstream or service courses in statistics and to newly practising statisticians or others concerned with data interpretation in any discipline who want to make the best use of modern statistical computer software

making sense of statistical methods in social research is a critical introduction to the use of statistical methods in social research it provides a unique approach to statistics that concentrates on helping social researchers think about the conceptual basis for the statistical methods they're using whereas other statistical methods books instruct students in how to get through the statistics based elements of their chosen course with as little mathematical knowledge as possible this book aims to improve students statistical literacy with the ultimate goal of turning them into competent researchers making sense of statistical methods in social research contains careful discussion of the conceptual foundation of statistical methods specifying what questions they can or cannot answer the logic of each statistical method or procedure is explained drawing on the historical development of the method existing publications that apply the method and methodological discussions statistical techniques and procedures are presented not for the purpose of showing how to produce statistics with certain software packages but as a way of illuminating the underlying logic behind the symbols the limited statistical knowledge that students gain from straight forward how to books makes it very hard for students to move beyond introductory statistics courses to postgraduate study and research this book should help to bridge this gap
